

Test report example

The test report is a document that provides a comprehensive overview of the testing activities performed during a project. It summarizes the test objectives, scope, approach, results, and any issues or observations encountered during the testing process. The test report is generated after regression testing and/or after every testing phase upon request. The test report can be made in Excel, “.csv”, and “.xml” formats including next fields:

ID	Title	Assigned to	Case ID	Defects	Comment	Run configuration	Status	Tested by	Tested on	Version
----	-------	-------------	---------	---------	---------	-------------------	--------	-----------	-----------	---------

To create a test report you should press the “Export run” button on the “test run” screen and choose the file format that you need:

Then you need to include the necessary fields in the report and tap on the “Export” button:

Export to CSV
